

CONFIDENTIAL CLIENT
CONFIDENTIAL PROJECT

COMPLETION:
2020

Primoris Canada was awarded the construction contract to erect 4 world scale fired heaters. The heater package consisted of 4 x twin cell radiant sections with shared convection sections and stacks. The furnaces utilize 120 burners to produce a duty of close to 400 MMBtu. The scope also included the modularization of the radiant boxes, installation of radiant coils on each cell, 25 levels of platforms, and approximately 2,100 LM of fuel gas supply lines. The entire scope was completed in a footprint just over twice the size of the heaters themselves and required critical lift plans with the use of 650 ton cranes and aerial work platforms.
